

ABSTRACT OF THE DISCLOSURE

Disclosed are a mobile communication terminal provided with a hands-free function and a controlling method thereof comprising the steps of: setting a
5 hands-free function of a mobile communication terminal; certifying whether an
originating call command or a calling request message are received; searching
information of a calling party inputted by a user's voice or an arbitrary originating
party's information from a mounted telephone directory; and guiding the searched
calling party's information by voice and then connecting a calling. According to this,
10 the user can originate or receive a calling by using a voice recognition function
and the hands-free function of the terminal without his hands' using even while
driving.
